

Majacraft Pioneer Specifications

General Description

The Pioneer has been designed by Majacraft to be a highly affordable spinning wheel - yet we have been careful not to compromise the functionality that Majacraft wheels are renowned for. The honey coloured oil finish is unique to the Pioneer and will obviously be treasured by it's owner.

As with all Majacraft wheels our accessories will fit on the Pioneer. You can add our specialist spinning equipment if you wish to pursue different styles of spinning.

The wide range of ratios, a versatile Delta Flyer and easy to use Scotch Tension System will make spinning a dream! The head can be adjusted in a similar way to the Little Gem so you can customise the orifice position to fit your style and body. The effortless double treadle spinning allows you to spin for long periods of time with no discomfort. The pedal position has been ergonomically designed to fit you comfortably as the spinner!

Construction Timber	Solid Radiata pine and MDF drive wheel
Weight	Approximately 11lbs (5.0kgs). This varies with the wood density of each wheel.
Wheel Diameter	12.6 "(320mm). Solid MDF.
Orifice Height	Adjustable - minimum height is 27.2" (690mm).
